

Ideation Phase

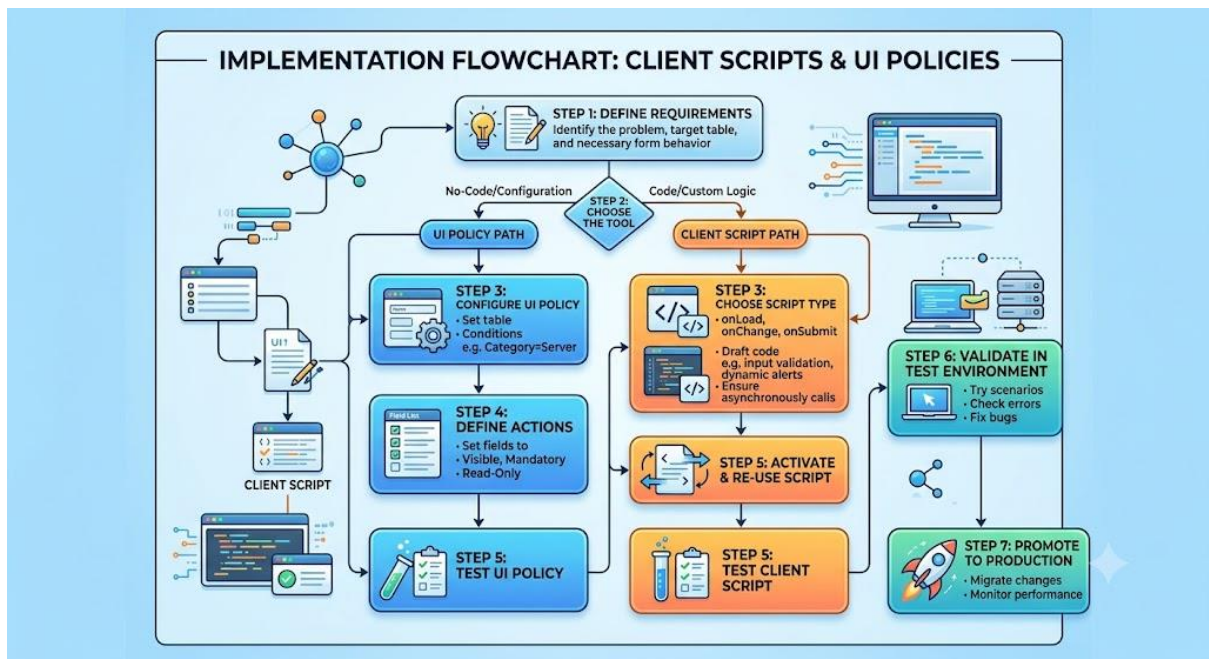

Define the Problem Statements

Date	02 October 2026
Team ID	SWTID-2026-1180
Project Name	Implement Client Scripts and UI Policy(incidents)
Maximum Marks	2 Marks

Customer Problem Statement Template:

"End users and support agents currently face frequent transaction rejections and input delays because input validation is handled on the server side after submission. This lack of immediate, client-side validation leads to corrupted data formatting, redundant submission attempts, and an estimated 25% increase in form completion times. There is a need to implement automated **Client Scripts** (onChange, onSubmit, onLoad) to deliver real-time data format verification, prevent invalid record submissions in the browser, and asynchronously validate dependencies via *GlideAjax* without freezing the user interface."

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A Service Desk Agent submitting an incident ticket	Complete and submit an incident record accurately and without delay	The system accepts invalid phone numbers and missing fields, only throwing errors after a full server page reload	The form lacks real-time client-side validation (onSubmit / onChange Client Scripts) to verify inputs in the browser before submission	Frustrated, delayed, and anxious about losing critical form data during repeated submission attempts
PS-2	An internal employee raising a workplace request	Fill out a simple hardware or software request on the self-service portal	I face a confusing, static form filled with dozens of irrelevant fields that do not apply to my request	The platform lacks conditional UI Policies to automatically hide, show, or make fields mandatory based on the category I select	Confused, overwhelmed by unnecessary clutter, and discouraged from using the self-service system
