

PROJECT DESIGN PHASE III

PROBLEM SOLUTION FIT

Date	02 October 2026
Team ID	SWTID-2026-1180
Project Name	Implement Client Script and UI Policy(incidents)
Maximum Marks	2 Marks

Problem / Pain Point	Solution Implemented	Impact & Benefit
Form Clutter & Cognitive Overload: Static forms display all fields simultaneously, causing confusion and hesitation.	Dynamic UI Policies: Automatically show or hide fields based on category selections.	Decluttered form interface, reduced mental fatigue, and faster completion.
Server-Side Validation Delays: Errors caught only after server submission cause page reloads, data loss, and processing friction.	onSubmit Client Scripts: Pre-validates data directly in the browser and aborts submission safely if errors exist.	Zero page reloads, complete preservation of typed notes, and confident submissions.
Malformed Data Entries: Invalid phone numbers or text strings reach the	onChange Regex & Inline Messaging: Evaluates syntax live as the user types and displays instant helper	Immediate error correction and pristine data hygiene prior to submission.
